

# Conservation Activity

## SAVING AT HOME (Project, 15 minutes)

Use this activity to find practical ways to save resources at home.

A person's resources can decrease little by little through wasteful living. On the other hand, saving a little here and a little there can add up to big savings over time!

See how many wasteful actions you can find in the picture below. There are at least seven.

Finish this lesson by making a list of ways to conserve resources at home. Try your ideas this week and get ready to share what happened with the class.
